

CYBER THREAT INTELLIGENCE

Threat intelligence that knows your *attack surface*.

Isaphia CTI ingests global threat feeds, your own IOCs, and dark-web exposure signals, then correlates every indicator against your continuously-discovered surface — so your team sees the dozen findings that matter today instead of triaging 50,000 IOCs a week. Built for mid-market security teams, MSSPs, and consultancies that need actionable intel without enterprise CTI budget.

PLATFORM CAPABILITIES

CISA KEV correlation Actively-exploited CVEs mapped to your surface	EPSS exploit scoring Real-world exploit probability per CVE	Global IOC feeds Botnet C2, malware URLs, malicious infrastructure	IP reputation Multiple commercial + open reputation sources
MITRE ATT&CK mapping Findings auto-tagged with technique IDs	Threat-actor landscape Sector-relevant APTs scored by live TTP overlap	Custom watchlists Your IOCs, brand keywords, executive terms	Paste & leak monitoring Domain + email exposure search across leak sources
Unified Risk Score Seven-signal blend (0–100) ranks every finding	Auto intelligence briefs Daily / weekly / monthly markdown reports per org	IOC relationship graph Indicator → Finding → Technique → Actor visualization	Analyst RFI workflow Org-scoped question / answer + suppression triage
Blocklist & EDL export Push high-confidence IOCs to firewall + EDR feeds	Continuous collection Per-feed cadence scheduler; decoupled from asset scans	TAXII 2.1 sharing Inbound + outbound peer / ISAC indicator exchange	Indicator search & pivot TIP-style analyst browser with filter, sort, pivot

INTEGRATIONS & ACCESS

Integrations & Workflow - SIEM: Splunk HEC, Elastic / OpenSearch, CEF (QRadar, Sentinel, ArcSight) - Ticketing: Jira, ServiceNow, Zendesk — severity → priority auto-mapped - Messaging: Email, Slack, Teams, generic webhook - CTI inbound: STIX 2.1 / TAXII 2.1 client, custom IOC paste, JSON / CSV - CTI outbound: TAXII 2.1 server, STIX 2.1 bundle export - Firewall / EDR: authenticated EDL feed of your high-confidence IOCs - ATT&CK Navigator v4.5 layer JSON download - Full REST API + signed webhooks for every event	Authentication & Access - SSO via SAML 2.0 / OIDC (Okta, Azure AD, Google, generic) - Two-factor (TOTP) enforced per role - RBAC: admin, analyst (platform or pinned), client - Hard multi-tenant isolation at the database query layer - Immutable audit log with target-label enrichment + audit-log API - Per-user alert read state + acknowledgement workflow - Operator-only IOC suppression / allow-list for false-positive triage
---	---

STANDARDS CONFORMANCE

- **STIX 2.1** — server + client, bundle export
- **TAXII 2.1** — discovery, API root, collections
- **MITRE ATT&CK v14** — technique-level mapping
- **CVSS 3.1 + EPSS** — exploit-prediction scoring
- **PCI DSS ASV** — quarterly external-scan workflow
- **OAuth 2.0 / OIDC** — SSO + machine-to-machine

RELIABILITY & SLA

- **99.9% uptime** target (rolling 30-day)
- **Daily encrypted backups** — 30-day retention default, configurable
- **RTO < 4h / RPO < 24h** — disaster recovery commitments
- **Geo-redundant** deployment optional
- **Data residency** configurable per deployment
- **Configurable retention** — findings, alerts, audit logs

SECURITY & DATA HANDLING

- **TLS 1.3** in transit, **AES-256** at rest
- **Secrets at rest** via env vars or KMS-backed vault
- **Bring-your-own-key** (BYOK) available on request
- **Continuous internal security review** — fix-then-publish policy
- **Independent third-party assessment** available under NDA
- **Responsible-disclosure** program: security@isaphia.com

SEE IT IN ACTION

THREAT INTEL DASHBOARD — RISK-PRIORITIZED FINDINGS

MITRE ATT&CK LIVE TECHNIQUE HEATMAP

IP REPUTATION — MULTI-SOURCE CONSENSUS SCORING

IOC RELATIONSHIP GRAPH — INDICATOR → FINDING → TECHNIQUE → ACTOR

DEPLOYMENT MODELS

SELF-SERVICE SAAS

Run it yourself.

Direct dashboard access for your team. Configure feeds, watchlists, recipients, and schedules. Full RBAC, unlimited users. Ideal for in-house security teams with at least one analyst.

MANAGED SERVICE

We watch for you.

Our analysts triage every finding and only escalate what matters. Monthly executive intel briefings. Direct line to threat analysts. Ideal for orgs without a dedicated CTI function.
